

Training behavior, token exposure and available learning signal

Harbor multi-harness Native OpenCode Harbor OpenCode-only

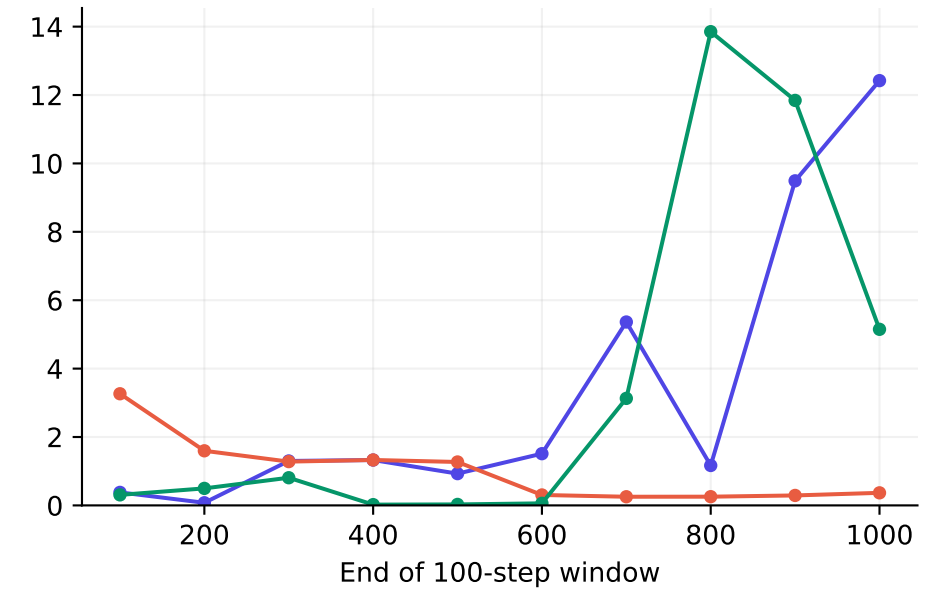

Mean completion tokens / admitted rollout

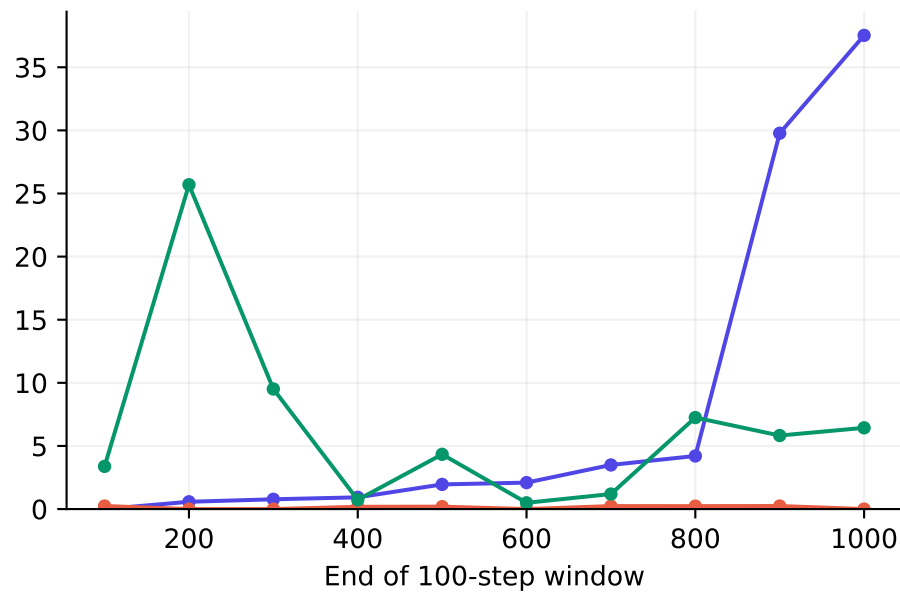

Mean emitted tool calls / admitted rollout

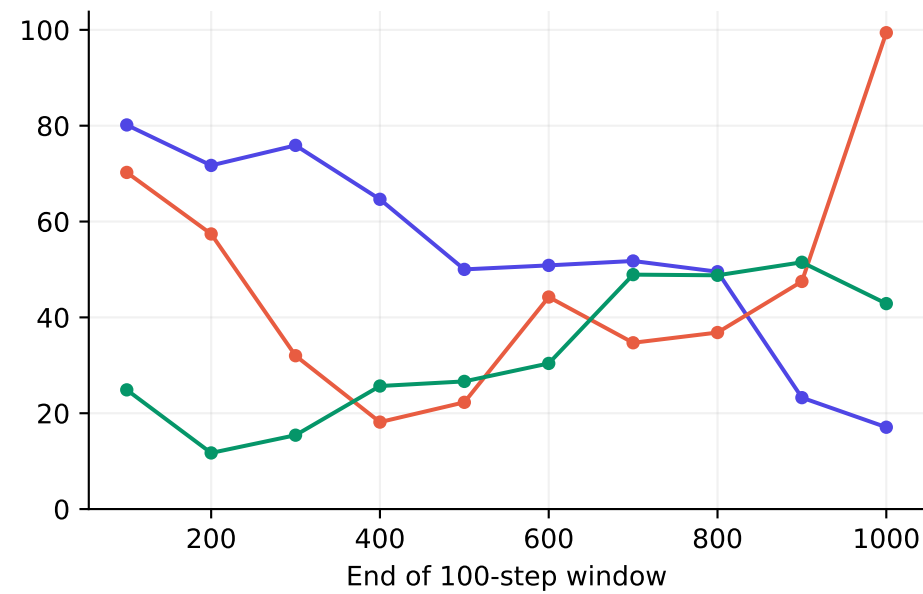

Completion tokens in text-only turns (%)

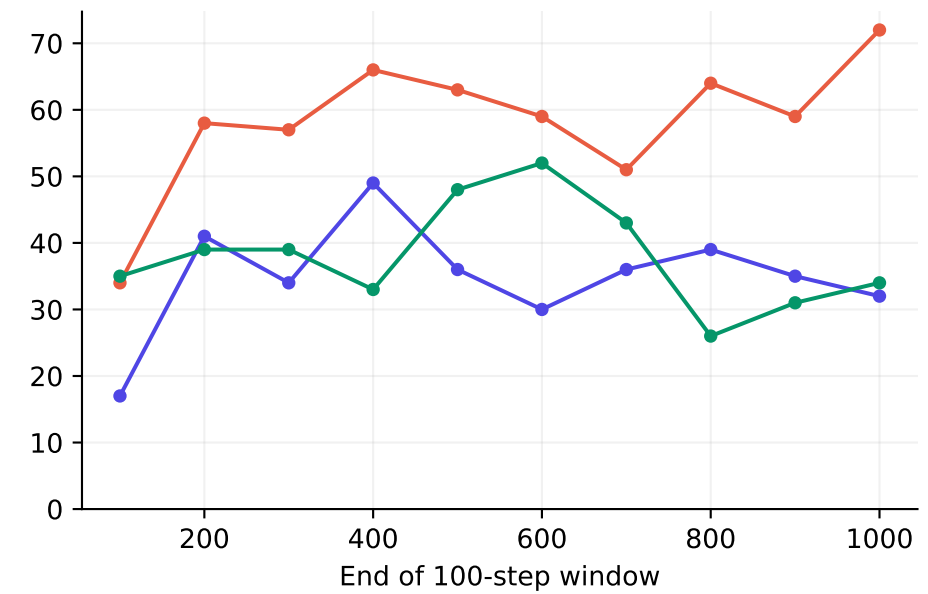

Admitted rollouts with a response >4,096 tokens (%)

Forwarded / supervised tokens

Steps with zero fresh gradient (%)

Captured turns from 13,625 admitted rollouts; multi-harness receipts start at step 31. Bottom-right panels use all 3,000 step records. Tool calls are emitted requests, not confirmed executions. Text-only includes reasoning and final answers. Zero fresh gradient does not rule out optimizer momentum.
